

LOCALLY BOTTLED EXCELLENT AND AFFORDABLE DRINKING WATER

Purpose

To supply tasty and healthy drinking water to everyone

A necessary complement to piped water

The need for municipal piped water is up to hundreds of litres of clean water per day per capita. The need for completely pure water for drinking and cooking is only a few litres per capita.

Health and quality advantage

HVR removes all types of contaminants from any type of source water. The normal feed is tap water, but it can also be well water, river water or sea water. HVR will remove:

- arsenic, fluoride, nitrate and other chemicals
- ordinary metals and ions as well as heavy metals and nanoparticles
- pesticides, disinfectants and other organic contaminants
- bacteria, virus, spores and endotoxins

It will also remove industrial pollutants **and it will make saltwater sweet.**

Healthy minerals and/or other addition are added to the water.

Environmental advantage

HVR supplies an environmentally and economically sustainable local supply of drinking water. Packaging is reused by deposit schemes.

Production capacity

HVR supplies one hundred people or 50 000 people with absolutely pure and healthy drinking water.

Finance

The equipment can be purchased. It can be leased, and it can be run as a franchise.

Your most important **food**.
Your most important **medicine**.
